Table of contents

Important notes:	1
File 1: Formatted Protein Assay Table	3
Input file names	3
Raw metabolite tables	3
Info files	3
Protein keys	3
Bridging file	3
Formatting	3

This README file describes the process for taking the raw data from the TOPMed X01 the protein assays and creating the following:

- File 1:
- File 2:
- File 3:
- File 4:
- File 5:

Important notes:

- You should always check you have the most recent files! I use dynamic dates, so this can be done by checking that your files match the versions on Github:
 - My profile can be found [here](#)

- My repositories are listed [here](#)
- The most recent version of this PDF README file can be found
- The most recent version of the source code for this README file can be found
- The most recent source code for creating the output files can be found

File 1: Formatted Protein Assay Table

Input file names

Raw metabolite tables

- A table of metabolite abundances from the amide assay: SMP_IntensityNormalized_20251005.csv

Info files

- Sample information to link TOPMed IDs to unique MESA SHARe ID and exam combinations: Mapping_SMP_Plate_20251005.csv

Protein keys

- Keys to link Olink IDs to names compounds: MESAOlink3k_proteinKeys_03292023.csv

Bridging file

- A file to bridge SHARe ids (sidno) with MESA IDs (idno) MESA-SHARe_IDList_Labeled.csv

Formatting

- The raw protein abundance file contained information on N=3040 protein assays (including those included for QC).
- When removing assays for QC, the raw protein abundance file contained information on N=2941 proteins.
